

Return to NSRC Help Desk home. Warning! DD-WRT now requires a 20 Euro activitation fee for many wireless devices including the Firmware Step 1: Download the Ubiquiti DD-WRT firmware located at: Step 2: Power down the NanoStation by unplugging the Ethernet cable from the POE box. Step 3: Plug your computer into the NanoStation POE box, and configure the adapter with the following settings: IP: 192.168.1.100 Subnet Mask: 255.255.0 Gateway: 192.168.1.20 Step 4: Hold the reset button (located on the bottom of the device, next to the Ethernet plugs) for approximately 10 seconds Step 5: While holding the reset button plug the power cable back into the firmware is located ping 192.168.1.20 until the device responds the type: bin put (firmware image name goes here) quit OpenWRT is a free, open source firmware that can be loaded onto a number of different wireless networking devices, including the Ubiquiti NanoStation2. OpenWRT is a lightweight Linux distribution bundled with software that is useful for the management and administration of wireless networks. Installing the Firmware Step 1: Checkout the OpenWRT source with Subversion svn co Step 2: Change into the "trunk" directory that was created when OpenWRT was checked out. Step 3: Run the following commands: ./scripts/feeds update ./scripts/feeds install -a make menuconfig From the configuration menu: Select 'Atheros 231x/5312' from the 'Target System' menu Select 'Ves'' to save changes Step 4: To compile OpenWRT, you must have the following dependencies installed on your system--all are available via apt in Ubuntu. inthol sdcc openssl-dev rsync xgettext ruby fastjar bison xsltproc jikes Step 5: Once you have resloved all of the dependencies you must now compile OpenWRT by typing: Step 6: Compiling OpenWRT takes quite a while, but when it is done, you will end up with a directory called "bin" in your "trunk" folder. In the "bin" folder, there will be a file called "openwrt-atheros-ubnt2-squashfs.bin"; this is your OpenWRT firmware image. Step 7: Power down the NanoStation by unplugging the Ethernet cable from the POE box. Step 8: Plug your computer into the NanoStation POE box, and configure the adapter with the following settings: IP: 192.168.1.100 Subnet Mask: 255.255.0 Gateway: 192.168.1.20 Step 9: Hold the reset button (located on the bottom of the device, next to the Ethernet plugs) for approximately 10 seconds Step 10: While holding the reset button plug the power cable back into the POE box Step 11: Open a command prompt and... cd into the directory for which the firmware is located ping 192.168.1.20 until the device responds tftp 192.168.1.20 From the tftp> prompt type: bin put openwrt-atheros-ubnt2-squashfs.bin quit Step 12 When the flashing is complete the LEDs on the back of the device will cycle and the device will reboots, you can log on to the web interface by navigating a web browser to 192.168.1.1 To get access to your Ubiquiti Networks NanoStation Loco M2, you need the IP of your device, the username and password. You'll find such information in the Manual of your Ubiquiti Networks NanoStation Loco M2 router. But if you do not have the manual for your router or you do not want to read the whole manual to find the default login information then you can use the quick guide below. To get to the router login page it's necessary that you are connected to the router. The default network name (SSID) is ubnt . Ubiquiti Networks NanoStation Loco M2 Login Guide Open your web browser (e.g. Chrome, Firefox, Opera or any other browser) Type 192.168.1.20 (the default IP to access the admin interface) in the address bar of your internet browser to access the router's web-based user interface. You should see 2 text fields where you can enter a username for your Ubiquiti Networks NanoStation Loco M2 is ubnt. The default password is ubnt. Enter the username & password, hit "Enter" and now you should see the control panel of your router. If above login credentials doesn't work with your Ubiguiti Networks NanoStation Loco M2 router then try this method Try different ID/password combinations that are widely used by Ubiguiti Networks that you'll find below. In this list are the most popular default username and password combinations used by Ubiquiti Networks. Sometimes the username and password combinations below to get access to your Ubiquiti Networks NanoStation Loco M2 wireless router. # Username Password 1ubntubnt Default login IPs for my Ubiguiti Networks. Maybe this will work for you. # Default Router IP 1192.168.1.12192.168.1.203 acquired via DHCP Manuals for Ubiguiti Networks NanoStation Loco M2 Manual Step 1. Connected the Ubiguiti PicoM2 to a computer using a CAT5 Ethernet cable. Step 2. Open firefox or Chrome web-browser and type the default IP address 192.168.1.20 into the web address bar, and make sure your computer is in the same IP address range, example 192.168.1.22 and you will see a login web page like the picture below. Step 3. Login with the default Username and Password. Username = ubnt. Password = ubnt and select your country and language and tick the "I agree to these terms of use" and click on the login button. Step 4. Go to the Wireless tab and follow the steps as indicated in the following screenshot. Videos by Miro Distribution YouTube Miro has the experience and a proven track record of supplying powerful, flexible and scalable solutions to our client's communication requirements. Miro pos... Since MiRO was founded in South Africa's leading distributors of Wireless, Networking, VoIP and IP Video products. We believe that IP technology is the future of communication and that it should be easily accessible for everyone. Our team of IP convergence professionals are here to take your business to the next level - we empower you to connect communities. Original Post Curated by Liquid Layer Networks At Liquid Layer Web Hosting [LiquidLayer.net], we've made a shared web hosting platform that's both feature-rich and easy to make use of. Our programmers have built up a custom Linux cloud web hosting platform plus an innovative Control Panel that perfectly takes advantage of its capabilities. After long hours of programming and bug fixing on our end, we are now capable to guarantee that all of our shared web hosting services are safe, virus-free, full of capabilities and very easy-to-work-with. In addition, they feature 99.9% server uptime as well as 99.9% network uptime warranties. liquidlayer.net LiquidLayer.net offers premium web hosting, SSD, Cloud Hosting, VPS & dedicated server solutions with 24/7 support & Mission Critical Uptime Powered by: HostCheetah Networks Global Web Hosting, Domain Registration, and Internet Services | PC Helper | Est 1996 - Web Hosting | US, AU, UK, Finland, Bulgaria | As it is evident from the name, Google AdSense is a program that is run by none other than Google. This a program for website publishers. The website publishers target the site content and audience through this program and serve text, images, video, or any interactive media advertisements accordingly. All the advertisements that are submitted are supervised, sorted, and maintained by Google. Revenue is initiated on either a per-click or per-impression basis. A cost-per-action service was beta tested by Google, but it was discontinued in October 2008 in favor of a DoubleClick offering owned by Google. In 2014, Google earned \$3.4 billion, which is 22% of total revenue through Google AdSense. This program operates on HTTP cookies. In 2021, more than 38.2 million websites use AdSense. By enrolling through Google ads, anyone who wants to advertise can do so with Google's targeted advertisement system. Based on website content, the user's geographical location, and other factors, Google uses its technology to serve advertisements. With the help of Google AdSense, one can earn money from their online content. Steps To Sign Up For Google AdSense First of all, you need these two things to create your AdSense account: A Google Account - Everyone already signs in a Gmail account if they are using Gmail or other Google services. If not, then it is very easy to create a google account. You have chosen a type of account, for instance- business or personal. Then create your mail address and password. After it is done, all there is left to do is to provide your recovery information. If you do this, you have your Google account. Your Own Content - You have to have your own content created from scratch if you open your own AdSense account. This is because this can be your own site, blog, or any other original content. You will be the owner of it, and it complies with the AdSense program policies. After you acquire the above-mentioned things, then you can go ahead and create your AdSense account following the steps mentioned below:- Visit this site- Google Adsense. Click on 'Get Started'. Enter the URL of the site that you want to show your advertisements on. Enter your email address. Choose whether you would like AdSense to send you customized help and performance suggestions. It is recommended that you choose 'Yes' so google can help you get more out of AdSense. Click on 'Save and Continue'. After this, sign in to your Google Account. You will be asked to select your country or territory. Then all you need to do is review and accept the 'Terms and Conditions' of AdSense. After all, this is done, click on 'Create account'. You are now signed in to your new AdSense account. How To Use Google AdSense After you are done with creating your account, you need to add it to your website. To do so, these are the steps that you should follow:- You need to have an existing website of your own before you get started. For those of your who do not have an existing website, do not apply for AdSense. Also, people who are in the process of creating their website is under construction, even then, do not apply for AdSense. Make sure your site complies with the rules. Google does not accept any website into this program unless you meet their eligibility requirements. You should have an easy way of navigation. This means that the text should be lined up properly; every function should work properly. After the following criteria are fulfilled, you can apply for AdSense. Then you have to determine which types of advertisements you want to be displayed on your website. On the left side of your dashboard, you will see a Content option, you will get a drop-down menu containing some additional options. Then, you have to click on the Ad Units menu. There you will select things like ad type, ad size, style, etc. There you can customize it any way you want to. After you are done configuring, you will get a 'save and get code' option at the bottom of the page. Clicking on it will automatically generate a code to add to your website. Copy and paste that code to your website. After you are done with it, all that you have to do is update your privacy policy. The last step is for you to verify your address. After these are all done, you are ready to use your AdSense account to earn through advertisements.
